

## Writing your Abstract

Members of the scientific community are expected to communicate their research findings to the broader research community and to the public.

As undergraduate interns at DOE laboratories and full-fledged members of the scientific community, you are required to communicate the results of your efforts by writing a **Research Abstract**, a succinct summary of your research findings. Abstracts provide a brief overview of your work and should consist of no more than 2500 characters, including spaces, arranged in a single paragraph and single-spaced.

Although an abstract is not explicitly divided into sections, it must contain four distinct parts:

1. The **introduction** section describes and appropriately connects the subject and context/background of the research to the purpose of the investigation.
2. The **methods** section identifies the methods used to study the subject of the investigation or identifies the existing procedures, models or programs used in the investigation.
3. The **results** section provides an explanation of what was discovered, accomplished, collected or produced.
4. The **conclusion** provides an interpretation of the results and what they mean to the investigation and an evaluation of the relevance or uniqueness of what was accomplished in the immediate context of the project's purpose and the broader scientific field.

Even though abstracts are typically written after a full-length research paper has been completed, the nature of undergraduate internships may require that an abstract be written before and/or during your research. For this reason, you should create initial drafts of your abstract early in your internship and update them regularly as your work progresses. At the end of your internship, a final version of your abstract can be quickly completed that accurately and fully reflects your accomplishments.

Although it is difficult to be both concise and descriptive, that is exactly what a scientific abstract must be. You should employ complete sentences and appropriate word choices that exclude jargon. The abstract should not include citations, references to sections in a research paper, graphs, tables, pictures or complex formulas. Despite these limitations, the abstract should be able to serve as a “stand alone” document that briefly reflects the nature of your investigation. Proper spelling, capitalization, punctuation, grammar and usage are described in the *Journal of Undergraduate Writing Style Guide*. (Please see the EduLink “Key Resources & Information Page.”)

## **Abstract Evaluations and Eligibility for Publication**

Your abstract must be submitted at the end of your term and will be considered for publication in the *Journal of Undergraduate Research*. All abstracts will be evaluated based on the criteria and scoring rubrics described below. Qualifiers have been written into the scoring rubrics to account for circumstances where research was not completed by the end of your internship period.

All abstracts that:

1. meet the DOE quality mission science criterion,
2. reflect quality research involvement, and
3. score above a predetermined value on the research abstract rubric

will be accepted for publication in the *Journal of Undergraduate Research* and may or may not require minor editing.

Abstracts that meet mission science criterion and reflect quality research involvement, but score below the predetermined value may also be considered for publication pending revision as directed by Headquarters and your Laboratory Education Director.

Abstracts that exceed the word limit will not be accepted or scored since abstracts that exceed 2500 characters will be truncated and unsuitable for publication.

Please see the EduLink “Key Resources & Information Page.” to view sample abstracts with accompanying scores.

**U.S. Department of Energy**  
Office of Science  
Workforce Development for Teachers and Scientists  
Summer Internships (SULI, CCI, FaST, PST)

All Abstracts must meet the following two criteria at minimum to be considered for Publication in the *Journal of Undergraduate Research*.

Then, each abstract is scored using the rubric on the next page.

<b>Qualifying Criteria for Abstracts</b>		
<b>Component</b>	<b>Eligible for Publication</b>	<b>Not Eligible for Publication</b>
<b>MISSION SCIENCE</b> The abstract reports on high quality, significant research that is aligned with one or more DOE mission areas.	Describes activities and tasks performed that are a part of a high quality scientific research project clearly connected to one or more DOE mission areas.	Describes activities and tasks that are NOT clearly connected to one or more DOE mission areas or are not a part of a high quality research project.
<b>RESEARCH INVOLVEMENT</b> The abstract reflects a meaningful involvement in the process of scientific research	Describes activities and tasks that reflect a rich involvement with the fundamental scientific principles essential to the research and are essential to the accomplishment of the research	Describes activities or tasks that reflect little understanding of the fundamental scientific principles related to the research, OR  Describes activities or tasks that are of only a routine or menial nature, without connection to the fundamental scientific principles related to scientific research.

Abstracts that meet the mission science and the research involvement criteria will be evaluated using the following rubric on a 0 to 10 point scale and considered for publication in the *Journal of Undergraduate Research*.
