

Where will you be in **SUMMER 2022?**

Imagine working on a collaborative project with Lawrence Berkeley National Laboratory (Berkeley Lab) scientists, fully supported — including a stipend and travel expenses for you and two students.

The **Visiting Faculty Program (VFP)** is a summer professional development program for current faculty. Come meet scientists at the **DOE Joint Genome Institute (JGI)**. Learn more about their current projects on energy and environmental genomics and large-scale data analyses. Collaborate on a VFP research project proposal.

You're invited to attend the JGI Visiting Faculty Program Pitch Event!

Wednesday, November 3, 2021
10 am PDT/1 pm EDT

From this [experience], I hope to successfully submit several papers in highly rated peer reviewed journals.

—*Isabelle Kemajou-Brown,*
Morgan State University

This summer experience was just what people in my position at smaller, undergraduate institutions that are not primarily focused on research need to be able to continue our high-level scholarship and make significant contributions to science.

—*Frank Yip, California State University,*
Maritime Academy

Workforce
Development
& Education

Berkeley Lab is supported by the DOE Office of Science and managed by the University of California.

The JGI is a national user facility located at Berkeley Lab in Berkeley, Calif. It is the only large-scale genome sequencing and analysis facility focused solely on the genomes of non-medical microbes, microbial communities, plants, fungi, algae and other targets relevant to DOE missions in energy, environmental biology, and nutrient cycling.

All VFP internships are facilitated by the Workforce Development and Education Department (WD&E). WD&E facilitates internships and career advancement opportunities at Berkeley Lab.
